BOAT MAINTENANCE

Boat surface maintenance

Boat and yacht cleaning is a very important part of ownership of any watercraft as regular cleaning helps prevent rust and decay of surfaces and components to keep them running efficiently. Decay can be especially serious when vessels are regularly placed in salt water. Regular cleaning helps preserve the boat or yacht and keeps it beautiful and in good condition providing a longer life in the water.

Choosing the right equipment is important when performing cleaning tasks. Scum and dirt are ongoing issues, so it is crucial to stock up on the correct cleaning supplies. Choose tools with soft bristles and surfaces whenever possible to prevent damage to the finish of the vessel. While cleaning will be necessary to cut through debris, preserving shiny surfaces for cosmetic reasons should also be a consideration.

Boat engine maintenance

Boat and yacht engines require regular maintenance to keep them running efficiently. This maintenance involves both cleaning and replacement of worn parts and is a good opportunity to inspect for any damage or signs of wear and tear.

- Regular boat engine cleaning will prevent the build-up of grease. Use an environmentally friendly cleanser first to clean the engine, and then use a solvent to get rid of excess grease.
- Whenever possible, clean engine components with a firm brush instead of solvents to lessen the impact on the environment.

Perform engine cleaning with steam or non-hazardous solvents as much as you can.

BOAT MAINTENANCE

Boat preparation for winter storage

Before storing a boat for the winter, engine maintenance and cleaning are essential to ensure that the boat is ready for long-term storage, this process referred to as winterizing a boat. A boat faces serious risk of damage when exposed over time to harsh weather conditions, and these could affect its performance and can become expensive to repair.

Before washing your boat for storage, it is wise to remove items such as fabrics, leather, canvases etc. from the boat and store them inside your garage - this will help keep them free from mould, as well as securing them from getting lost.

Thoroughly scrub the entire boat with boat washing soap and water, right from the hull to the interior. Remove any scum line around the waterline of the boat by applying hull cleaner.

A high performance pressure cleaner offers a quick and convenient way of cleaning the outside surface of the boat.

Last but not least, do not forget to wipe down all window and glass surfaces. Now the boat is ready to be covered for storage.
